Consumption: the first choice is Natural!

“Natural products are gaining interest in many markets and entering a new era. Purchasing natural products is now becoming part of a lifestyle, an act of sustainable living, of a meaningful consumption act. Consumers expect the best, for them but not only. Criteria such as origin, manufacturing processes, environmental and societal impacts are key in their decision-making process. Cosmetics is one of the most advanced industries to this subject.

It is no longer enough to offer quality plant extracts; now people ask for a connection to the associated geographic origin and are willing to feel a trusting relationship

with the men and women who grow the plants. Herbarom was created precisely from this target: **offering plant materials that encourage us to re-establish ourselves in this world, to reconnect to natural lands full of history, to build new relationships with the people who cultivate the soil and know how to get the very best out of the vegetable world.**

Whether this is for its rarity, its history, the tradition linked to it, its properties, its origin, its extraction process or its effectiveness; each herbal raw material is precious and valuable. But the main challenge is **to help you to compose the solution that makes “sense” for your customers and your company.**

Discover now the perfect illustration of this team project carried out every day with you and with passion for more than 25 years.”

Nicolas LECLERCQ
Herbarom - Head of Sales
for Cosmetics

IDENTIFICATION CARD

HERBAROM

Birth: 1994 by Mr Dominique ARDOUVIN with only 760€ in capital and one conviction: to extract the best from what nature offers us.

Where: South of France - Drôme, a land of tradition and the birthplace of organic farming.

Historical distinctive sign: real pioneer in plant extraction and distillation.

What we do: growing, sourcing, extraction, formulation, processing, regulatory support.

What we like: Cosmetics, aromatherapy, flavors & fragrances, nutrition & health and agriculture!

What we hate: Be disconnected with you (Cheers to 2022)

Moto: Finding inspiration from nature to turn your ideas into reality.

HERBAROM COSMETIC

Natural cosmetic formulation is a very demanding exercise comparable to high gastronomy. Formulators must work as real pastry artists to find the **perfect balance between skin care benefits, sensoriality, sustainability and ethics.** They also have to sprinkle the product with a bit of history and magic to create a strong and transporting **storytelling.** Finally, they must comply with various regulatory requirements, but also labels

and consumers demand for **transparency.** What a challenge!

As in the kitchen, it is thanks to good ingredients that we can make exceptional natural cosmetics. That's why Herbarom offers various **natural ingredients to build all your cosmetic formulations and inspire your creativity:** Essential Oils, Vegetable Oils, Butters, Floral and Distilled Waters, Cellular Waters, Hydrolats.

Did you know that our ingredients can help you to create various textures of natural cosmetics?
DISCOVER A FEW EXAMPLES!

Ingredients in the spotlight

OUR NEW ORGANIC VEGETABLE OILS RANGE

Rich in fatty acids and often in vitamin E, vegetable oils are at the heart of natural cosmetic formulas. They bring nourishing properties, sometimes antioxidants, which makes them real **natural allies to keep the skin in good condition.** Their skin feels, more or less rich, allow the **creation of a wide variety of textures** for exceptional consumer experiences.

HERBAROM ENRICHES ITS OFFER WITH A RANGE OF VEGETABLE OILS,

WHAT ABOUT...

“ECO-DESIGN, A BUILDING BLOCK FOR SUSTAINABLE BUSINESS MODEL”

Eco-design is more than just a marketing approach. It is a **strong and fundamental driver of business development**. Tackling this topic means working to reduce our environmental footprint & optimize our societal impact. At Herbarom, since 1994, we have adopted this approach in everything we develop and produce for our customers.

USE NATURAL INGREDIENTS

Ensure **ingredients regenerate by natural ecosystem processes** at a higher rate than the rate at which they are harvested, without permanently exhausting resources.

PRIORITIZE LOCAL INGREDIENTS

Harvesting ingredients close to the production site is a **good way of reducing the carbon footprint** of the final product. This requires less transport and facilitates better use of the local economy. HERBAROM has developed partnerships with the local producers of 3 regions in France particularly through cultivation contracts and at two distillation units. For plants requiring sourcing outside France, the company uses its know-how to support sustainable export sectors.

CHOOSE ORGANIC INGREDIENTS

From its base in the Drôme, major French MAPP terroir and pioneer region of AB and a sustainable future, HERBAROM promotes **organic cultivation**.

GUARANTEE GENTLE EXTRACTION METHODS

HERBAROM masters distillation processes by steaming, leaching, concentration and maceration. The traditional technique of heating over an open flame guarantees a **slow and respectful distillation of the plants**. Use of additive-free water allows distillation by untreated steam drive.

REDUCE THE NUMBER OF INGREDIENTS

HERBAROM is a source of advice on the choice of ingredients composing **formulas while favoring multifunctionals**.

FORMULATE IN ACCORDANCE WITH “COSMOS” STANDARDS

HERBAROM enriches formulas from reputed plant properties, from ingredients certified by **COSMOS** standards.

WASTE UPCYCLING

WE KNOW HOW TO CREATE STRONG PARTNERSHIPS WITH FOOD INDUSTRIALS AND TO UPCYCLE THEIR PRODUCTION WASTES INTO COSMETICS INGREDIENTS FOR YOUR FORMULATIONS.

Valorizing food industry by-products into cosmetic ingredients avoids waste production and reduces cultivated areas allocated to non-food applications.

OUR KEY UPCYCLED INGREDIENTS PRODUCED FROM FOOD INDUSTRY WASTES.

- Distilled Waters:**
 - ▶ APPLE AND RICE
- Hydroglycerin Extracts:**
 - ▶ CHESTNUT
- Oily Macerats:**
 - ▶ SAFFRON PETALS

WHAT IS UPCYCLING?

Upcycling means recycling from the top.

It is commonly said that “Upcycling is the new Recycling”.

Unlike recycling, there is a notion of added value behind upcycling: the new object produced is intended to be of higher value or aesthetics than the initial object.

Upcycling offers both environmental and economical benefits: it limits our environmental footprint by reducing the use of raw materials and energy, and reducing waste. It also allows the creation of more affordable goods from no or low value wastes.

Get Inspired!

HAND CREAM

WITH APPLE AND CHESTNUT
UPCYCLED EXTRACTS

UPCYCLING CONCEPT

Apple distilled water is obtained from **cider production waste**.

Chestnut hydroglycerin extract is created from **“marrons glaces” food production waste**.

SENSORIAL PRODUCT

Thick shiny white cream.
Nourishing and non-greasy skin-feel.

SKIN CARE BENEFITS

Apple and Chestnut are rich in polyphenols with **antioxidative properties, which prevents skin-aging.**

Apple is known for its **moisturizing properties.**

WATERS UPTAKING

HERBAROM KNOW-HOW IS TO CAPTURE LOST WATERS FROM COSMETICS AND FOOD INDUSTRIAL PROCESSES AND TO VALORIZE THEM INTO YOUR FORMULATIONS.

Due to water scarcity, diversifying the water sources integrated into the liquid galenic formulation is a real challenge.

OUR KEY UPCYCLED INGREDIENTS
PRODUCED FROM UPTAKEN WATERS.

Cellular Waters - captured from fruits drying processes:

- ▶ RASPBERRY

Hydrolats - valorization of essential oil production co-products:

- ▶ ROSE

WATER SCARCITY, WHAT ARE WE TALKING ABOUT?

Water scarcity has several causes:

- 1. Global population increase:** The more the population grows, the more the global demand for water increases.
- 2. Climate change:** Global warming leads to more regular and more intense episodes of drought.
- 3. Air and water pollution:** Pollution alters the quality of available water, sometimes going so far as to make it undrinkable.

"ACCORDING TO THE UNITED NATIONS, WATER NEEDS WILL INCREASE BY 50% BY 2030."

LOCAL SOURCING

HERBAROM CLOSELY WORKS WITH FRENCH FARMERS, LOCATED NEARBY OUR PLANT WHENEVER POSSIBLE, TO OFFER FRENCH INGREDIENTS FROM LOCALLY GROWN CROPS OR ENDEMIC SPECIES

Herbarom' DNA allows you to select several 100% MIF ingredients to create truly committed cosmetics, going beyond marketing claims!

OUR KEY MADE IN FRANCE INGREDIENTS

- VEGETABLE OIL - *Made from plants cultivated in France*
 - ▶ HEMP - SUNFLOWER
- ESSENTIAL OILS *Made from plants cultivated in France*
 - ▶ CARROT - LAVENDER

MADE IN FRANCE ORIGIN

"Made in France" is one of the main trends in indie brands.

A product is considered as Made In France (MIF) as soon as its last substantial step is carried out in France and at least 45% of its added value comes from the area.

The growing demand for Made in France products shows the consumer's awareness of local sourcing benefits, reducing the

product carbon footprint and leading to more sustainable cosmetics.

"Since the start of the pandemic, 64% of French people have consumed more Made in France products."

*According to Opinion Way survey for Insign.

Beyond the product

AT HERBAROM, WE PUT ALL OUR HEART AND ENERGY INTO CREATING INGREDIENTS THAT ARE MORE THAN RAW MATERIALS.

Our products reflect our approach, sincerely committed to our environment, and convey strong values which can support and build your brand concept.

ORGANIC INGREDIENTS

COSMOS CERTIFIED and AB labels reflect our commitment for a more sustainable cosmetic industry. They guarantee sustainable vegetable growing conditions and gentle transformation processes, complying with the principles of green chemistry.

Our certified ingredients also contribute to the global organic content of your cosmetic, the key for the COSMOS ORGANIC certification.

LOCAL PRODUCTS

MADE IN FRANCE

Local sourcing of endemic plants makes it possible to limit transport and therefore the carbon footprint of our ingredients, but also supports and enhances the work of local farmers.

Beyond sustainability and ethics, local sourcing also promotes traceability and can be a source of inspiration for vibrant and real story-telling based on our territory's history and our traditions.

TRACEABILITY FROM FIELD TO JAR

Close ties with our partner farmers allow us to offer you the greatest transparency and the best traceability on many products.

We follow the EffCI GMP standard guaranteeing quality and safety in the production of cosmetic ingredients.

Herbarom guarantees its products quality based on independent producers' supply, from local distribution channels, supervised and audited by our own experts.

FAIR PRODUCTS

We are convinced that working with independent farmers who have solid expertise in growing specialty plants is the most efficient, sustainable and equitable economic model.

Together, we are building genuine networks of expertise rooted in specific areas and developed intelligently with nature and people. Growing agreements allow us to guarantee fair remuneration for producers.

Ecovadis awarded Herbarom a Gold medal for its CSR policy, reflecting the ethics and transparency of the company's impact on society and on the environment.

HERBAROM, YOUR PARTNER

CREATING TAILOR-MADE SOLUTIONS FROM NATURE

Are you looking for a rare or original plant extract? You grow a plant but you don't know how to extract all its benefits?

Herbarom develops a tailor-made extraction process and creates the unique natural ingredient that will sublimate your cosmetics.

A READY-TO-USE-PRODUCT!

Our team of experts takes care of the entire project. After a first project design step, we support you from the sourcing of the plant to the product extraction and its regulatory validation.

HOW TO DESIGN A CUSTOMIZED PROJECT WITH HERBAROM?

To meet your business goal and your customers expectations, we design your project together in **3 key stages**:

1 Your expectations: Qualification of your request

Our sales team and engineers draw up, with you, precise specifications.

2 Our pipeline of solutions: sourcing and development

R&D laboratories and Supply department works closely to follow key steps,

- look for ingredients relevant for your project goals and challenges
- securise technical, legal and industrial faisability
- select final pool of solutions (specific ingredient, blends, formulations).

3 The product selection

R&D laboratories create product samples which take into account the constraints of industrial processes and which make it possible to define product's specifications.

Based on these proofs of concept, you will be able to select your product and finalize the project agreement with our sales team.

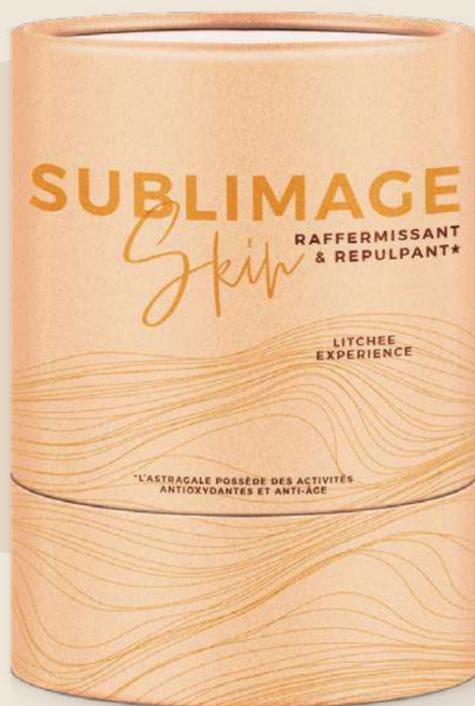

THE INDUSTRIAL PROJECT CAN START!
