

HERBAROM LABORATOIRE

beauty & personal care market

**HERBAROM
LABORATOIRE** has
become a key French
player in the following
markets

**BEAUTY &
PERSONAL CARE**

**FOOD &
BEVERAGE**

**FLAVOR &
FRAGRANCE**

**NUTRITION &
ANIMAL HEALTH**

THE PROMISE

AT HERBAROM LABORATOIRE, WE VALUE THE BEST THAT NATURE HAS TO OFFER.

WE PROVIDE A TAILORED RESPONSE TO OUR INDUSTRIAL CLIENTS' INNOVATIONS, TRANSFORMING EACH PLANT EXTRACT INTO A SOURCE OF DIFFERENTIATION AND SUCCESS.

WE CAREFULLY SELECT OUR RAW MATERIALS FROM TRUSTED PARTNERS, ENSURING THE HIGHEST QUALITY AND FULL TRACEABILITY TO MEET OUR RIGOROUS STANDARDS.

Nature at Its Best

We value the best that nature has to offer

Innovation & Differentiation

Tailored solutions transforming plant extracts into success

PLANT WATERS

How we obtain distilled waters?

Floral/distilled water is a by-product of steam distillation, where plant compounds are carried by steam to a condenser. The lighter essential oil rises to the top, while the remaining water, called floral water or hydrolat, contains a mild concentration of aromatic compounds (0.1%–0.5%).

HYDROLATES

Obtained from **fresh plants** and are the **co-product** of essential oil distillation.

DISTILLED & FLORALS WATERS

Obtained from **dried fruits, flowers and plants** guaranteeing **availability all year long**.

AQUACELLS

Cellular waters are constitutive waters of plants obtained from **vacuum evaporation**.

Characteristics

- Integration on formulation : 1 - 100%
- Color : Transparent to pale yellow
- Odor : Slight to Strong
- DDM : Depends on conservative used

Use

Lotions
Facial Mists
Emulsions
Hygiene

- Shampoo
- Shower gels
- Scrubs

The properties would depend on the plant we're using, however for a large part of these products the following properties can be found :

- Mild on Skin
- Suitable for all skin types
- Natural origin
- Antioxydant
- Antimicrobial
- Soothing

BOTANICAL EXTRACTS

How we obtain plant extracts?

Vegetal Extraction : process that lead to an extraction of certain constituents present in the plant. It is an operation of solid/liquid separation : a solid body (vegetal) is in contact with a fluid (solvent). Molecules of interest are extracted by the solvent.

HYDROGLYCERIN EXTRACTS

Obtained by a **mixture** of **water** and **glycerin** to extract the active compounds from plants.

Natural humectant, allowing to replace classic glycerin adding a **plant-based touch**.

Uses

Skincare

- Serums
- Creams - emulsions
- Eyes contours

Recommended
incorporation
percentage between
1 and 10 %

OILY MACERATES

Obtained by **infusing plant** materials in a **carrier oil**.

The resulting oil contains the **liposoluble active compounds** from the plants.

Uses

Emulsions Oils

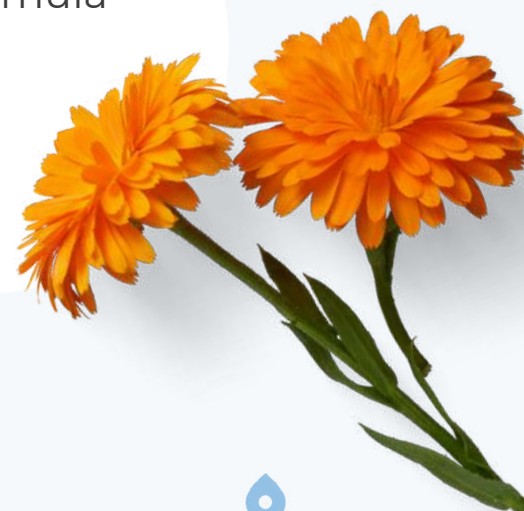

- Hair
- Body
- Massage

Recommended
incorporation percentage
between **2 and 100 %**

The properties would depend on the plant we're using, however for a large part of these products the following properties can be found :

- Mild on Skin
- Humectant & Moisturizer
- Natural origin
- Silky, smooth finish to formula

HERBAROM
LABORATOIRE

VEGETABLE OILS & BUTTERS

Herbarom sources high-quality vegetable oils and butters from trusted suppliers, ensuring purity, traceability, and effectiveness. This careful selection guarantees natural and high-performance ingredients for the cosmetics industry.

VEGETABLE OILS

Liquid fats obtained from the seeds, nuts, or fruits of plants through pressing or extraction.

They **remain liquid at room temperature.**

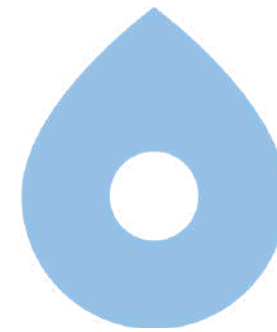

Uses

Skincare

- Moisturizers
- Cleansers
- Serums

Hair treatments

Water-free cosmetics

BUTTERS

Fats derived from plants, typically extracted from **seeds** or **nuts**.

They are **solid** or **semi-solid** at **room temperature.**

Uses

Body butters

Lip balms

Haircare

Water-free cosmetics

Recommended incorporation percentage between 1 and 10%

Interest on formulation : vegetable source fatty phase

ESSENTIAL OILS

ESSENTIAL OILS

Rich in volatile aromatic compounds extracted from plants, generally obtained by steam distillation or cold pressing.

They are highly concentrated, liquid at room temperature, and capture the characteristic aroma and active properties of the plant.

Uses

Aromatherapy
Body Care
Hair Care

Recommended incorporation percentage is very low (0.1% - 0.5%)

Interest on formulation : concentrated on active compounds

Herbarom distills a selection of essential oils in-house, ensuring exceptional quality and traceability. For other references, we carefully source from trusted partners who share our high standards. This approach allows us to offer a diverse range of pure and effective essential oils for the cosmetics industry.

Two main commercial categories:

- Specialty essential oils (**Lovage, Carrot, Angelica, Parsley, Thyme, Lavandin**): These are produced by Herbarom Laboratoire directly from the plant.
- Trade essential oils (Eucalyptus, Lemon, Clove, etc.): These are carefully selected and purchased as such for resale or use in production.

Two main types of plants:

- Dried plants (Lovage, Carrot, Parsley, etc.): Require a complex distillation process.
- Fresh plants (Lavender, Thyme, Melissa, Neroli, etc.): Require distillation immediately after harvest.
